# Stockholm Baltic Sea Tour Press Release – Swedish Parliament Decision Declared Illegal.

## Citizen Group to take action through Courts in affected countries 10-08-2010

The organizations behind the Nuclear Baltic Sea Tour 2010 are declaring the decision of the Swedish parliament, made on the 17<sup>th</sup> June this year, illegal, and propose taking action through courts in countries affected by the radioactivity released by the Swedish and other nuclear sites on the Baltic Sea. The Swedish MPs had no mandate from the people to make such a decision. The recent elections in Sweden avoided the nuclear power questions and the 17<sup>th</sup> June decision of Parliament overturns the democratic decision of the people of Sweden taken in 1980, said Ditta Rietuma, general secretary of BSRRW.org.

In the 25 years of operation of these plants, the aggregated releases have exceeded the quantity of radioactivity released by the Chernobyl accident, said Roland von Malmborg, the chairman of BSRRW.org, and recent discoveries in science have shown that the national agencies have been applying an outdated and incorrect radiation risk model.

The radioactive contamination of the Baltic Sea is now astonishingly high and is causing serious health problems in coastal populations, said Prof Chris Busby, one of the experts advising the organization. Breast cancer rates in the coastal counties of Sweden increased by 15% in the 5 years following the Chernobyl accident, whereas, in the inland counties the rates actually fell! He said. This too is a matter for the European Courts and National Courts in the affected countries since their citizens are suffering harm.

Furthermore the Atomic Industry has made Sweden poor, says economics professor Ake Sundström. Up to the end of the millennium, an astonishing 275 billions SEK of losses have been poured into the black hole that is the nuclear industry, he continued. This analysis was endorsed by Belorussian professor Georgij F. Lepin, an international expert on the economics of nuclear energy.

Swedish expert Gabor Tiroler revealed that Sweden has now become subordinate to the US in many areas involving nuclear pollution. The undemocratic decision taken to permit the bombing by US and NATO forces in Norrbotten is an unprecedented and astonishing event. The US have refused to deny that they will be testing new weapons systems containing the radioactive substance Depleted Uranium.

# Military industry

- History – the atomic-industry was *created by* the military industrial complex.
- *Depleted Uranium* is the by-product of the atomic-industry used by the Military complex for the production of the most dangerous weapons on the surface of the Earth.
- *Uranium* in DU weapons attaches to the DNA of all living systems causing permanent genetic damage (used in Iraq, Afghanistan, Yugoslavia, Gaza).
- *Military complex gets Uranium free of charge* with the excuse of them taking care of the nuclear waste.

# DU and other radionuclides in the air flows

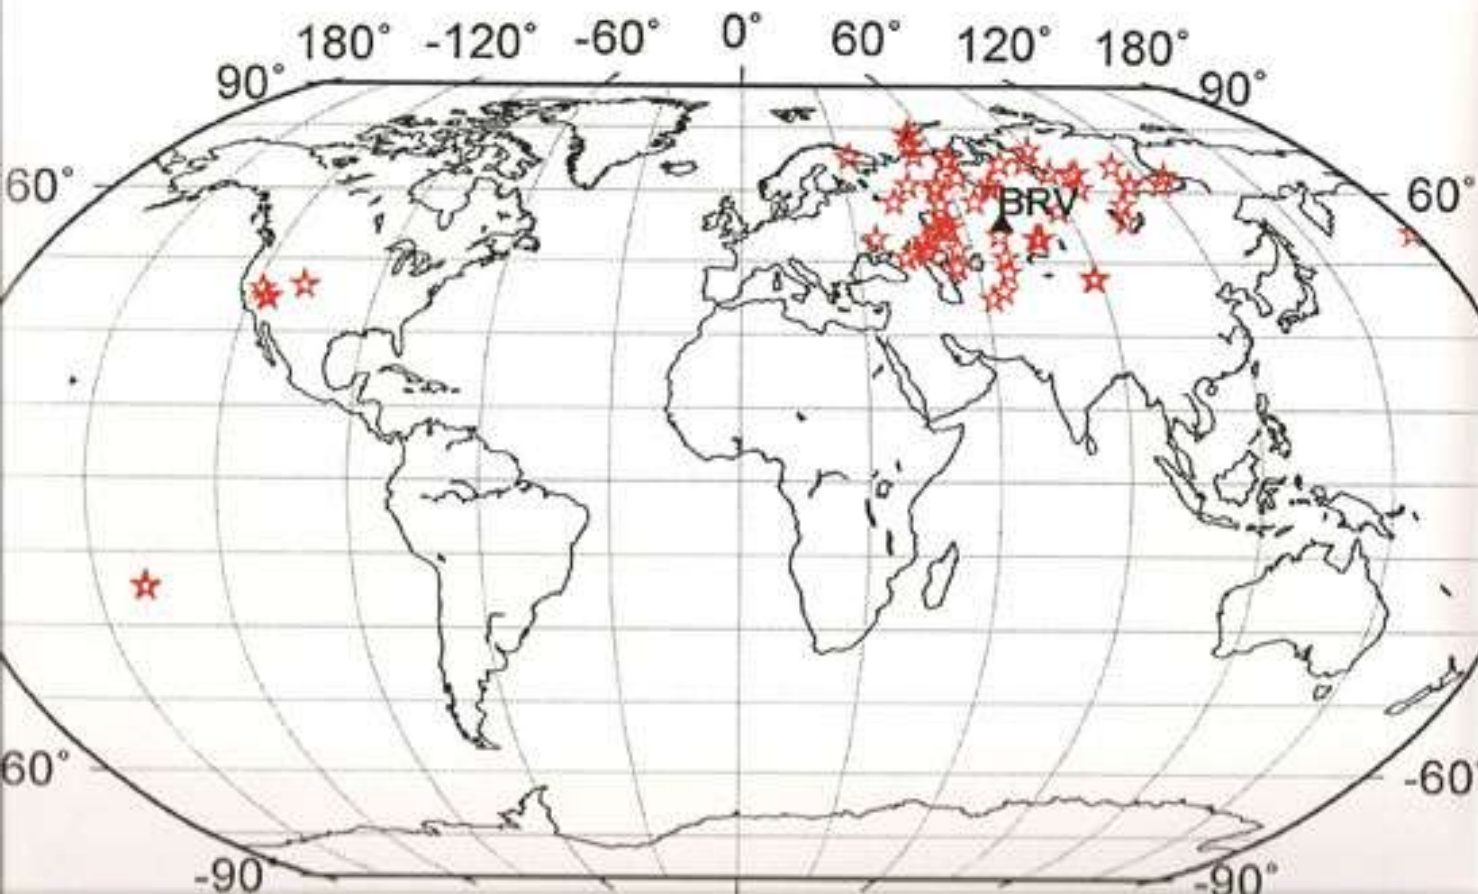

What goes around comes around – air and water flows redistribute nanoparticles of the pulverised nuclear waste to our lands and forests, oceans and seas, rivers and lakes....

# Underground Nuclear Tests During 1966–1996. LEGALISED ATOMIC-CATASTROFY SOURCE.

Experimental Final Nuclear Repositories  
being built in Forsmark, Sweden and  
Olkiluotto, Finland

- Potencial LEGAL ATOMIC-  
DISASTER SOURCES

# Forsmark, Sweden

# Olkiluotto, Finland

**Explosive methane tectonics, as methane hydrate ice crystal in the rock turns instantly into gas ( at raising temperatures after the ice age). SKB does not discuss this risk at all.**

## EXPLOSIV METANTEKTONIK I BERG

The quarrying explosives and the radioactive wastes are planned to be brought down in to the rock at the same time in the repository building process.

**explosives and radioactive wastes**

**The existence of all life forms around the Baltic Sea is threatened if the explosion of nuclear wastes occurs on the Baltic Sea shore.**

The toxic highly radioactive wastes disperse in to the sea

# MKB = EIS

The preliminary Environmental Impact Statement (*only in Swedish*) was published in the end of 2009 and the whole public inquiry process was finished at the concluding SKB meeting in Forsmark February 6th 2010. Download:

<http://www.skb.se/e772c90a-2015-4d8b-b259-80e5722de769.fodoc>

- Radiation is discussed only on the pages 37-38, with an astonishing statement that after 100.000 years the levels of radioactivity of the repositied waste will be similar to the natural background levels. That is incorrect as most of the waste is Uranium that remains highly radioactive for 45 billion years.
- Second crucial error is on page 37, where it is stated that it is enough to use ICRP radiation risk estimation model, just because Swedish Rad Protection Agency SSM.se has so recommended. EU law recommends using the most competent models, therefore ECRR model ([www.euradcom.org](http://www.euradcom.org)).

**European Spallation Source is being  
built in Lund, Sweden**

[www.esss.se](http://www.esss.se)

# ESS is not defined as a nuclear facility!!!

Part of the target will be exchanged every 45 days and stored in the nuclear waste repository

ESS-S claims that the mercury target is a closed system.

The part of the Mercury target where the proton beam enters into the Mercury is exposed to intensive heat flow and **extremely intense radiation**.

**A part of the target has to be exchanged after 45 days run of the ESS** and will have to be stored in a nuclear waste repository.

# European Spallation Source

- ESS will be the world's largest and most modern neutron scattering facility. 7 of the 26 neutron scattering facilities around the world have designs comparable with the ESS and most of them are equipped with sub-critical reactors allowing transmutation studies

# Even MAX IV - next generation synchrotron radiation facility ([www.maxlab.lu.se](http://www.maxlab.lu.se)) at ESSS.se

ESS

# Future Transmutation of Nuclear Waste ?

A future Accelerator-Driven Nuclear Waste Transmutation System would consist of three major sub-systems:

- **a proton accelerator (like ESS)** with very high power (5 MW for a demonstrator, up to ~50 MW for an industrial burner);
- **a burner reactor** where spallation and transmutation would occur;
- **a processing plant** in which short-lived isotopes that could not undergo further transmutation would be removed for secure disposal, and where other isotopes could be recycled into new fuel assemblies for the burner reactor.

So as the global industry this year 2010 starts to build in Lund the first of the three components necessary for a transmutation plant.

Are they planning more facilities ?  
Would they tell ?

## Olof Karlsson, physicist and chairman of Sweden's alternative energy organizations (SERO):

- "The fact that the accelerator may be the first step towards a new prototype reactor (which was first imagined by Carlo Rubbia) on Swedish ground – this is something that nobody wants to talk about. But if you know something about nuclear physics, you should realize that the size and effect of ESS is meant for transmutation experiments on a large scale – not just as occasional experiments.
- ESS could be the first phase in developing a full scale, scary Rubbia reactor – accompanied with the necessary reprocessing plants.
- The municipality (Lund) which is expected to give territory to establish the European Spallation Source project, should at least get legal guaranties, that transmutation of nuclear waste is not part of what ESS is going to be used for!" But even then tomorrows legal guaranties can be changed in the future.

# SCANDINAVIAN NEUTRON SOCIETIES

# Sweden is among the world's top arms exporters in per capita terms

- Institutions like the Nobel Prize have helped link Sweden's international reputation to peace and reconciliation. But few people know Sweden is also one of the world's top exporters of weapons. Sweden is among the world's top arms exporters in per capita terms. Its clients include the United States and Britain, with shipments more than doubling since 2000.
- Alfred Nobel established Bofors company in Karlskoga for the weapons industry. One of its group is now owned by British Aerospace (BAE), Europe's biggest weapons company. And the other group went into Saab, Bofors Dynamics, which is another Swedish-owned company. General Motors in the United States owns Saab, the automaker, and Ford owns Volvo, another Swedish company.
- Saab is Sweden's biggest weapons manufacturer

# Nuclear waste in Uranium weapons

Despite what Swedish and global *nuclear* industry tells us or plans without telling, Swedish and Finish *nuclear waste* is the byproduct contributing to further proliferation of *nuclear weapons* materials – Uranium weapons, causing permanent genetic damage around the world

[http://www.bsrrw.org/?page\\_id=109](http://www.bsrrw.org/?page_id=109)

# Nuclear Industry = war mangling national economy parasite

The message of Swedish economist Åke Sundström's book fr 2002, Nuclear Power has made Sweden poorer "Kärnkraften har gjort Sverige fattigare", may be summarised :

After over-investing in the military Nuclear Power investments in the 60s and 70s, the mainly government-owned Swedish Nuclear power companies were forced to dump the surplus on to unwilling consumers *at prices around half the cost of production*. That is how 300 billions SEK were lost, just in Sweden, already before the shift of millenia.

# Stockholm Baltic Sea Tour Press Release – Swedish Parliament Decision Declared Illegal.

## Citizen Group to take action through Courts in affected countries 10-08-2010

The organizations behind the Nuclear Baltic Sea Tour 2010 are declaring the decision of the Swedish parliament, made on the 17<sup>th</sup> June this year, illegal, and propose taking action through courts in countries affected by the radioactivity released by the Swedish and other nuclear sites on the Baltic Sea. The Swedish MPs had no mandate from the people to make such a decision. The recent elections in Sweden avoided the nuclear power questions and the 17<sup>th</sup> June decision of Parliament overturns the democratic decision of the people of Sweden taken in 1980, said Ditta Rietuma, general secretary of BSRRW.org.

In the 25 years of operation of these plants, the aggregated releases have exceeded the quantity of radioactivity released by the Chernobyl accident, said Roland von Malmborg, the chairman of BSRRW.org, and recent discoveries in science have shown that the national agencies have been applying an outdated and incorrect radiation risk model.

The radioactive contamination of the Baltic Sea is now astonishingly high and is causing serious health problems in coastal populations, said Prof Chris Busby, one of the experts advising the organization. Breast cancer rates in the coastal counties of Sweden increased by 15% in the 5 years following the Chernobyl accident, whereas, in the inland counties the rates actually fell! He said. This too is a matter for the European Courts and National Courts in the affected countries since their citizens are suffering harm.

Furthermore the Atomic Industry has made Sweden poor, says economics professor Ake Sundström. Up to the end of the millennium, an astonishing 275 billions SEK of losses have been poured into the black hole that is the nuclear industry, he continued. This analysis was endorsed by Belorussian professor Georgij F. Lepin, an international expert on the economics of nuclear energy.

Swedish expert Gabor Tiroler revealed that Sweden has now become subordinate to the US in many areas involving nuclear pollution. The undemocratic decision taken to permit the bombing by US and NATO forces in Norrbotten is an unprecedented and astonishing event. The US have refused to deny that they will be testing new weapons systems containing the radioactive substance Depleted Uranium.
