Where is the Heart of UN?

22-09-2010

Citizen Group to take action through Courts in affected countries and UN Institutions. In the 25 years of operation of the nuclear plants in the BSR, the aggregated releases have exceeded the quantity of radioactivity released by the Chernobyl accident and recent discoveries in science have shown that the national agencies have been applying an outdated and incorrect radiation risk model. The organizations behind this summers Nuclear Baltic Sea Tour 2010 declaried the decision of the Swedish parliament, made on the 17th June this year, illegal, and propose taking action though courts in countries affected by the radioactivity released by the Swedish and other nuclear sites on the Baltic Sea. The Swedish MPs had no mandate from the people to make such a decision. The recent elections in Sweden avoided the nuclear power questions and the 17th June decision of Parliament overturns the democratic decision of the people of Sweden taken in 1980.

The radioactive contamination of the Baltic Sea is now astonishingly high and is causing serious health problems in coastal populations. Breast cancer rates in the coastal counties of Sweden increased by 15% in the 5 years following the Chernobyl accident, whereas, in the inland counties the rates actually fell! This too is a matter for the European Courts and National Courts in the affected countries since their citizens are suffering harm.

Furthermore the Atomic Industry has made Sweden poor. Up to the end of the millennium, an astonishing 300 billions SEK of losses have been poured into the black hole that is the nuclear industry

Sweden has now become subordinate to the US in many areas involving nuclear pollution. The undemocratic decision taken to permit the bombing by US and NATO forces in Norrbotten is an unprecedented and astonishing event. The US have refused to deny that they will be testing new weapons systems containing the radioactive substance Depleted Uranium. **In the current Security System it takes a generation to prove any use of any new genetically harmful weapon.**

It´s time for the Heart Cultures of the world to heal the wounds created by the Pyramidal Mind Cultures

Stockholm Baltic Sea Tour Press Release – Swedish Parliament Decision Declared Illegal

1. The organizations behind the Nuclear Baltic Sea Tour 2010 are declaring the decision of the Swedish parliament, made on the 17th June this year, illegal, and propose taking action though courts in countries affected by the radioactivity released by the Swedish and other nuclear sites on the Baltic Sea. The Swedish MPs had no mandate from the people to make such a decision. The recent elections in Sweden avoided the nuclear power questions and the 17th June decision of Parliament overturns the democratic decision of the people of Sweden taken in 1980, said Ditta Rietuma, general secretary of BSRRW.org.

continued 2(3) Stockholm Baltic Sea Tour Press Release – Swedish Parliament Decision Declared Illegal

2. In the 25 years of operation of these plants, the aggregated releases have exceeded the quantity of radioactivity released by the Chernobyl accident, said Roland von Malmborg, the chairman of BSRRW.org, and recent discoveries in science have shown that the national agencies have been applying an outdated and incorrect radiation risk model.
3. The radioactive contamination of the Baltic Sea is now astonishingly high and is causing serious health problems in coastal populations, said Prof Chris Busby, one of the experts advising the organization. Breast cancer rates in the coastal counties of Sweden increased by 15% in the 5 years following the Chernobyl accident, whereas, in the inland counties the rates actually fell! He said. This too is a matter for the European Courts and National Courts in the affected countries since their citizens are suffering harm.

continued 3(3) Stockholm Baltic Sea Tour Press Release – Swedish Parliament Decision Declared Illegal

4. Furthermore the Atomic Industry has made Sweden poor, says economics professor Ake Sundström. Up to the end of the millennium, an astonishing 275 billions SEK of losses have been poured into the black hole that is the nuclear industry, he continued. This analyses was endorsed by Belorussian professor Georgij F. Lepin, an international expert on the economics of nuclear energy.
5. Swedish expert Gabor Tiroler revealed that Sweden has now become subordinate to the US in many areas involving nuclear pollution. The undemocratic decision taken to permit the bombing by US and NATO forces in Norrbotten is an unprecedented and astonishing event. The US have refused to deny that they will be testing new weapons systems containing the radioactive substance Depleted Uranium.

”TOWARDS A BALTIC SEA UNAFFECTED BY HAZARDOUS SUBSTANCES -

HELSINKI COMMISSION Overview 2007”

Baltic Marine Environment Protection Commission

- to the Ministerial Meeting in Poland, 15 November 2007. page 17

http://www.helcom.fi/stc/files/Krakow2007/HazardousSubstances_MM2007.pdf

“The levels of anthropogenic radionuclides are higher in the Baltic Sea than in other water bodies around the world. Compared to the North East Atlantic and the North Sea, the concentrations of caesium-137 in the Baltic Sea are 40 and 10 times higher, respectively. “

Césijs 137 Rígas júras lící 20.000 – 50.000 Bq/kvm, 90-to gadu beigás un 21 gadsimta sákumá, gadsimtu mijá (HELCOM)

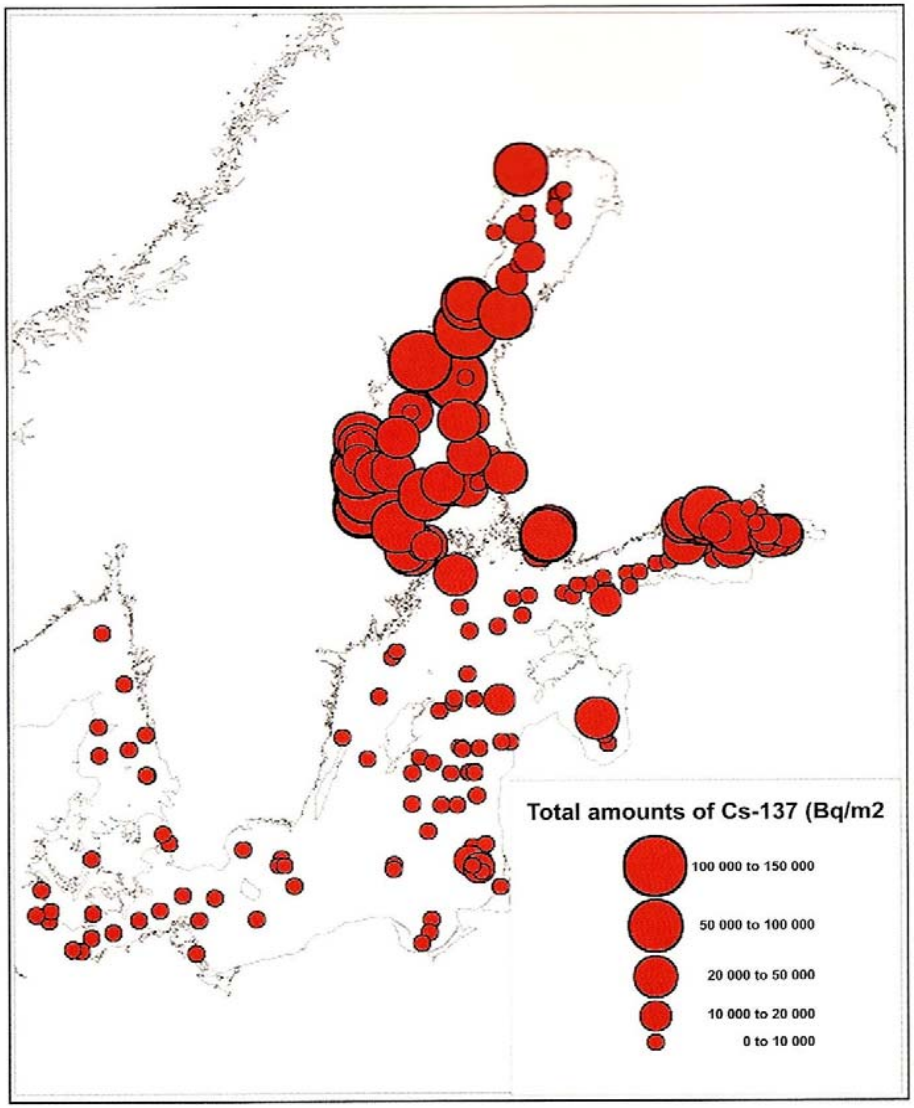

Figure 1:
Total amounts of ^{137}Cs (Bq/m^2) at different sampling stations in the Baltic Sea in the late 1990s and the beginning of the 2000s (Ilus et al. 2007). Most of ^{137}Cs is in the sediments of the Bothnian Sea and in the eastern Gulf of Finland, due the high deposition of the Chernobyl fallout in these areas, the high tendency of ^{137}Cs to bind in sediment particles in brackish water environments, and the high sediment accumulation rates in these areas.

Plutonijs 239, 240 Rígas júras lící 150 – 200 Bq/kvm, 21 gadsimta sákumá (HELCOM)

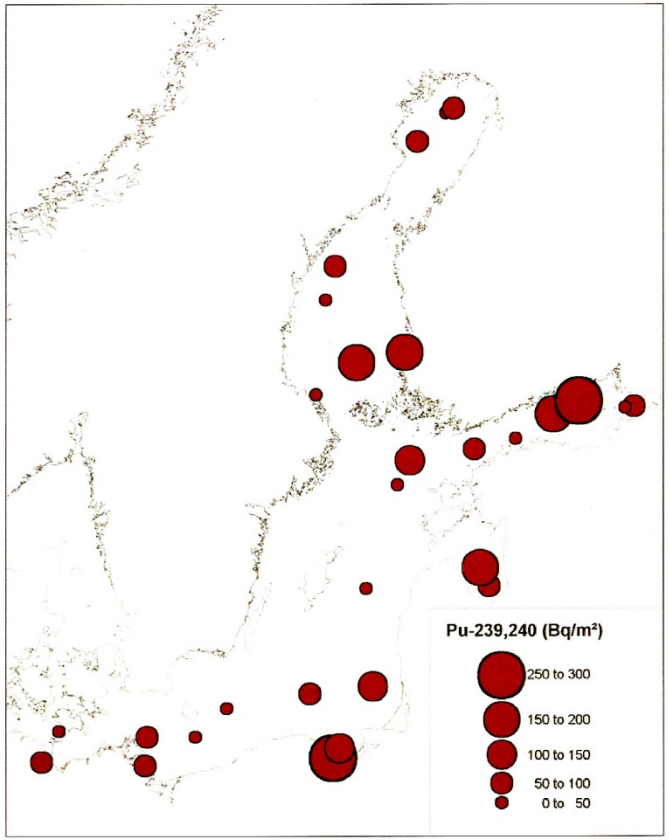

Figure 10.
Total amounts of Pu-239,240 (Bq m^{-2}) at different sampling stations in the Baltic Sea at the beginning of the 2000s.

Sub-region	Number of sediment cores	Maximum (Bq m^{-2})	Median (Bq m^{-2})	Total inventory (TBq)
Bothnian Bay	4	94	69	1.25
Bothnian Sea	8	178	156	6.86
Gulf of Finland	8	299	92	1.60
Baltic Proper + Gulf of Riga	29	265	47	5.60
Belt Sea	2	51		
Total	51			15.3

Table 3.
Total inventories and maximum and median values of Pu-239,240 in different sub-regions of the Baltic Sea.

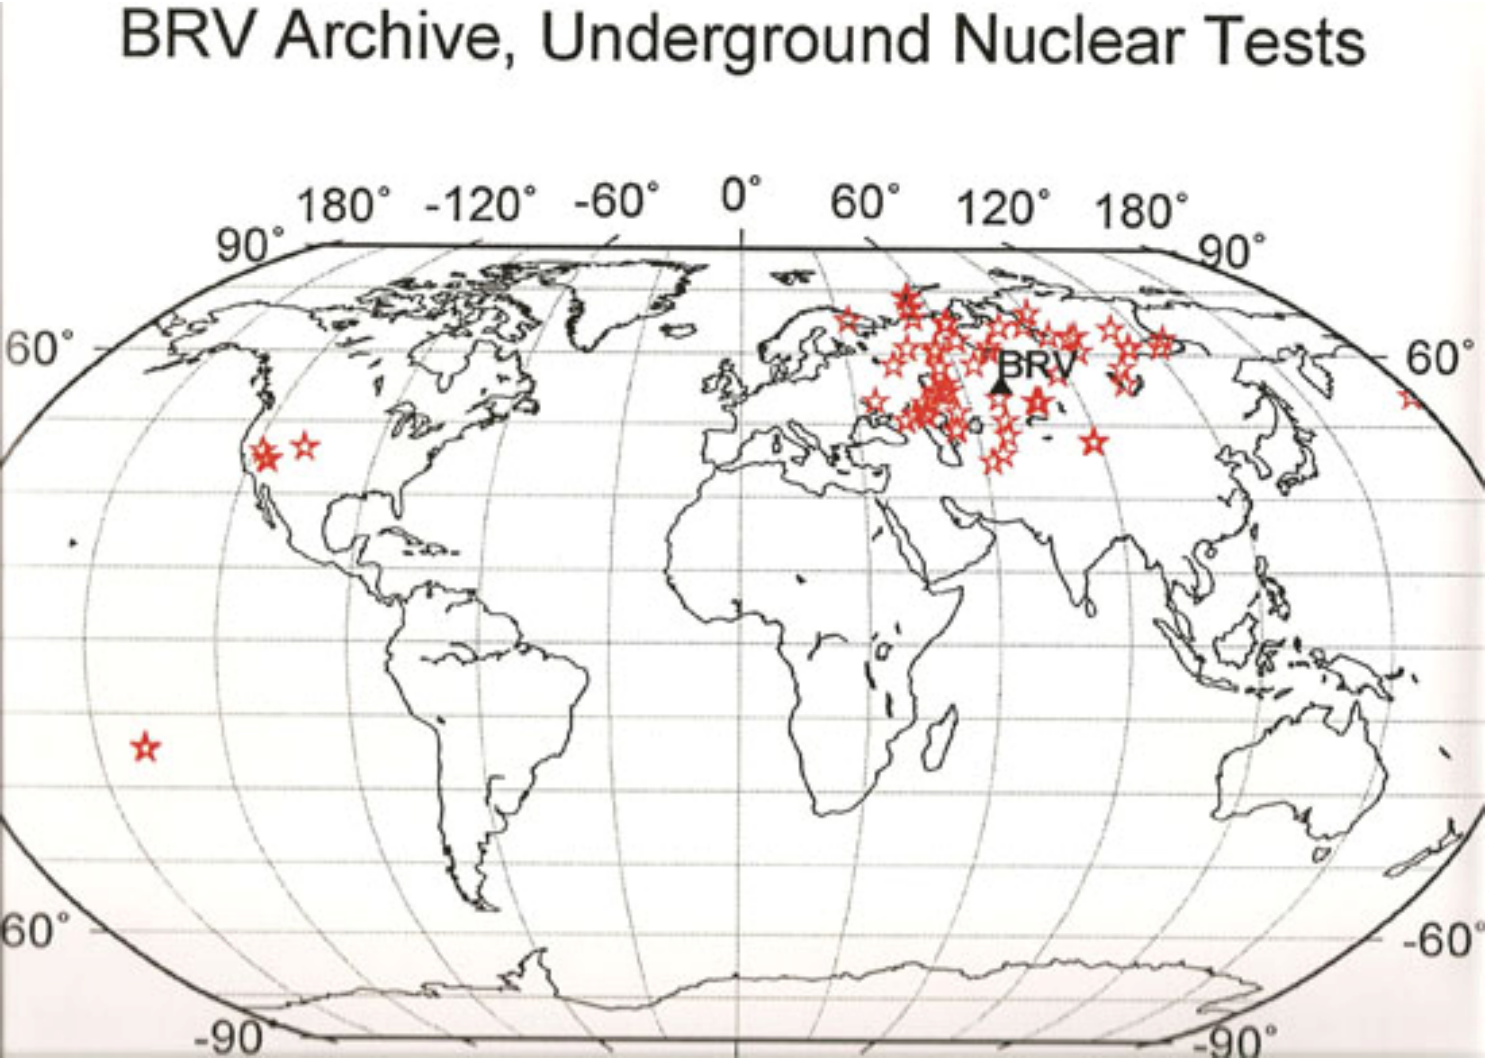
Military industry

- History – the atomic-industry was *created by* the military industrial complex.
- *Depleted Uranium* is the by-product of the atomic-industry used by the Military complex for the production of the most dangerous weapons on the surface of the Earth.
- *Uranium* in DU weapons attaches to the DNA of all living systems causing permanent genetic damage (used in Iraq, Afganistan, Jugoslavia, Gaza).
- *Military complex gets Uranium free of charge* with the excuse of them taking care of the

DU and other radionuclides in the air flows

What goes around comes around – air and water flows redistribute nanoparticles of the pulverised nuclear waste to our lands and forests, oceans and seas, rivers and lakes

Underground Nuclear Tests During 1966–1996. LEGALISED ATOMIC-CATASTROFY SOURCE.



BOROVOYE DIGITAL SEISMOGRAM ARCHIVE FOR UNDERGROUND NUCLEAR TESTS DURING 1966–1996

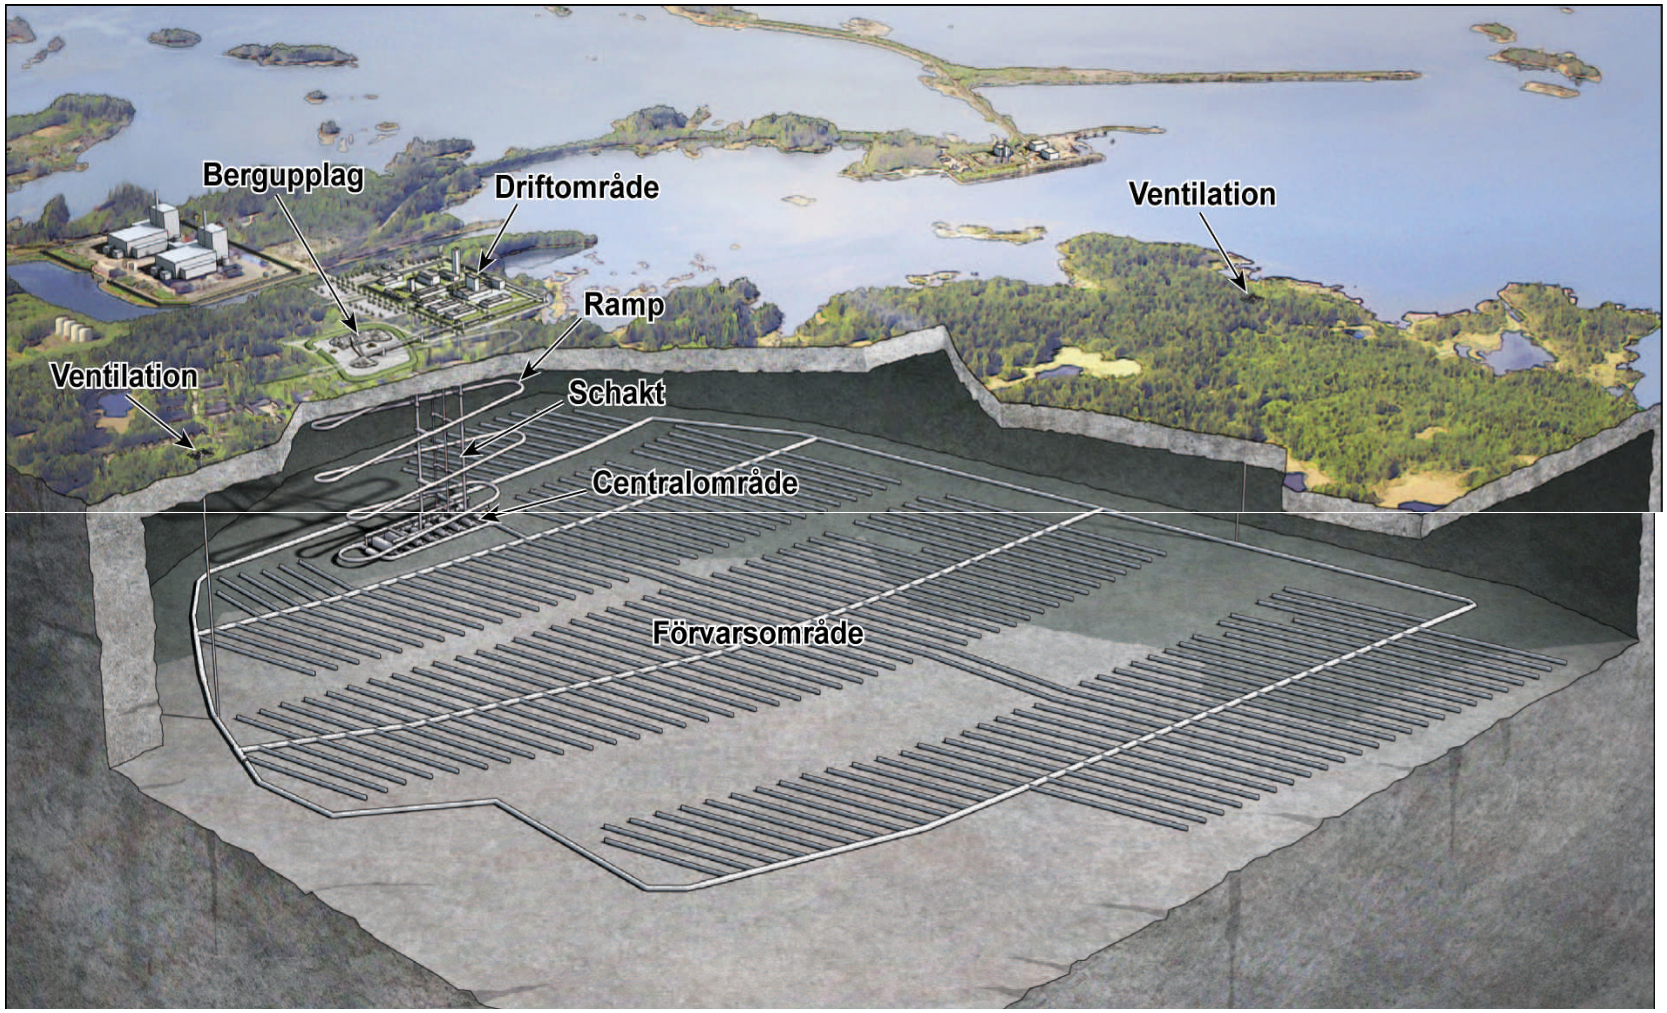
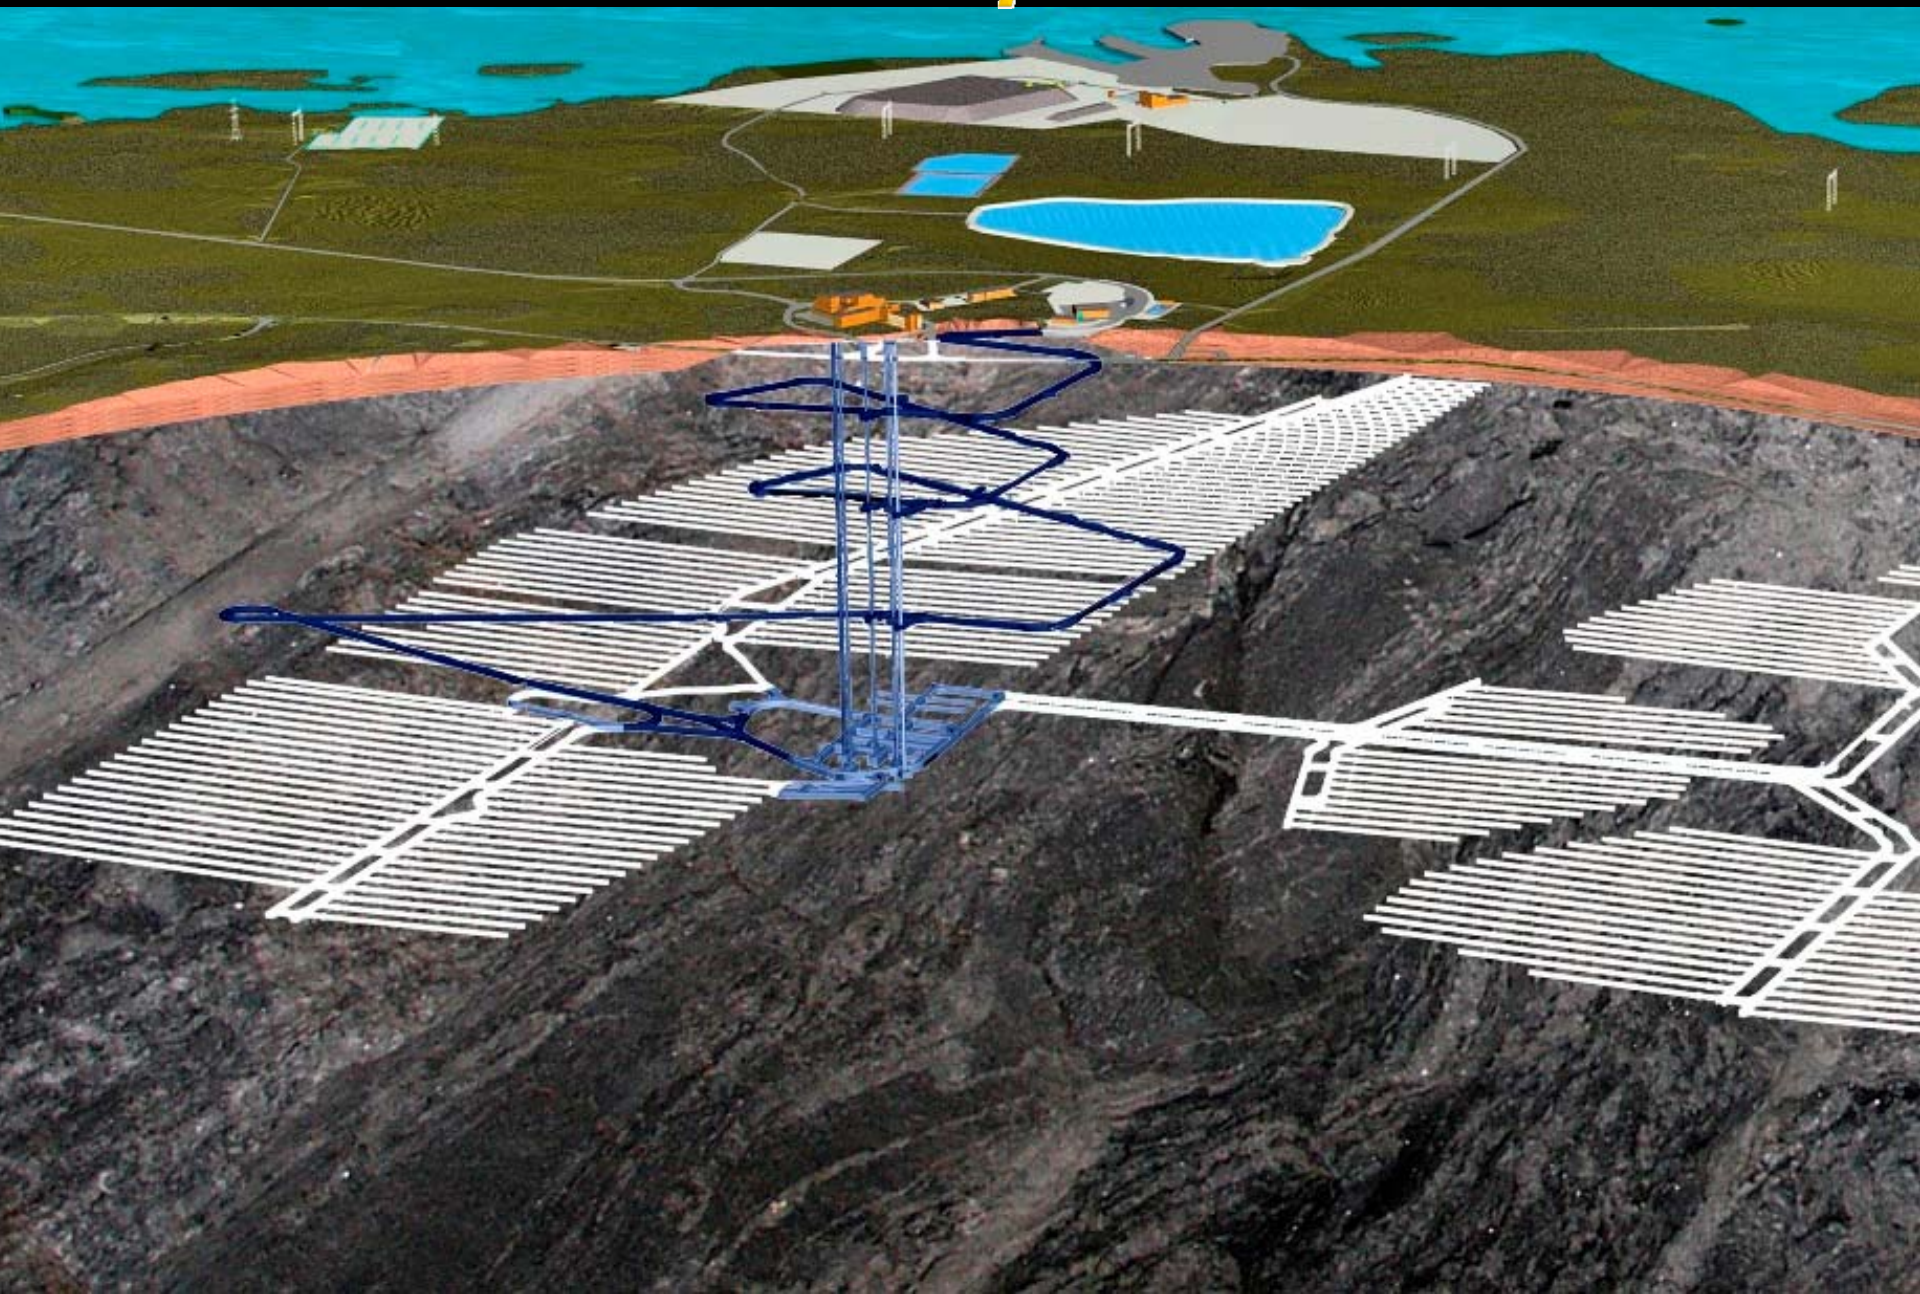
Experimental Final Nuclear Repositories being built in Forsmark, Sweden and Olkiluotto, Finland

- Potencial LEGAL ATOMIC-DISASTER SOURCES

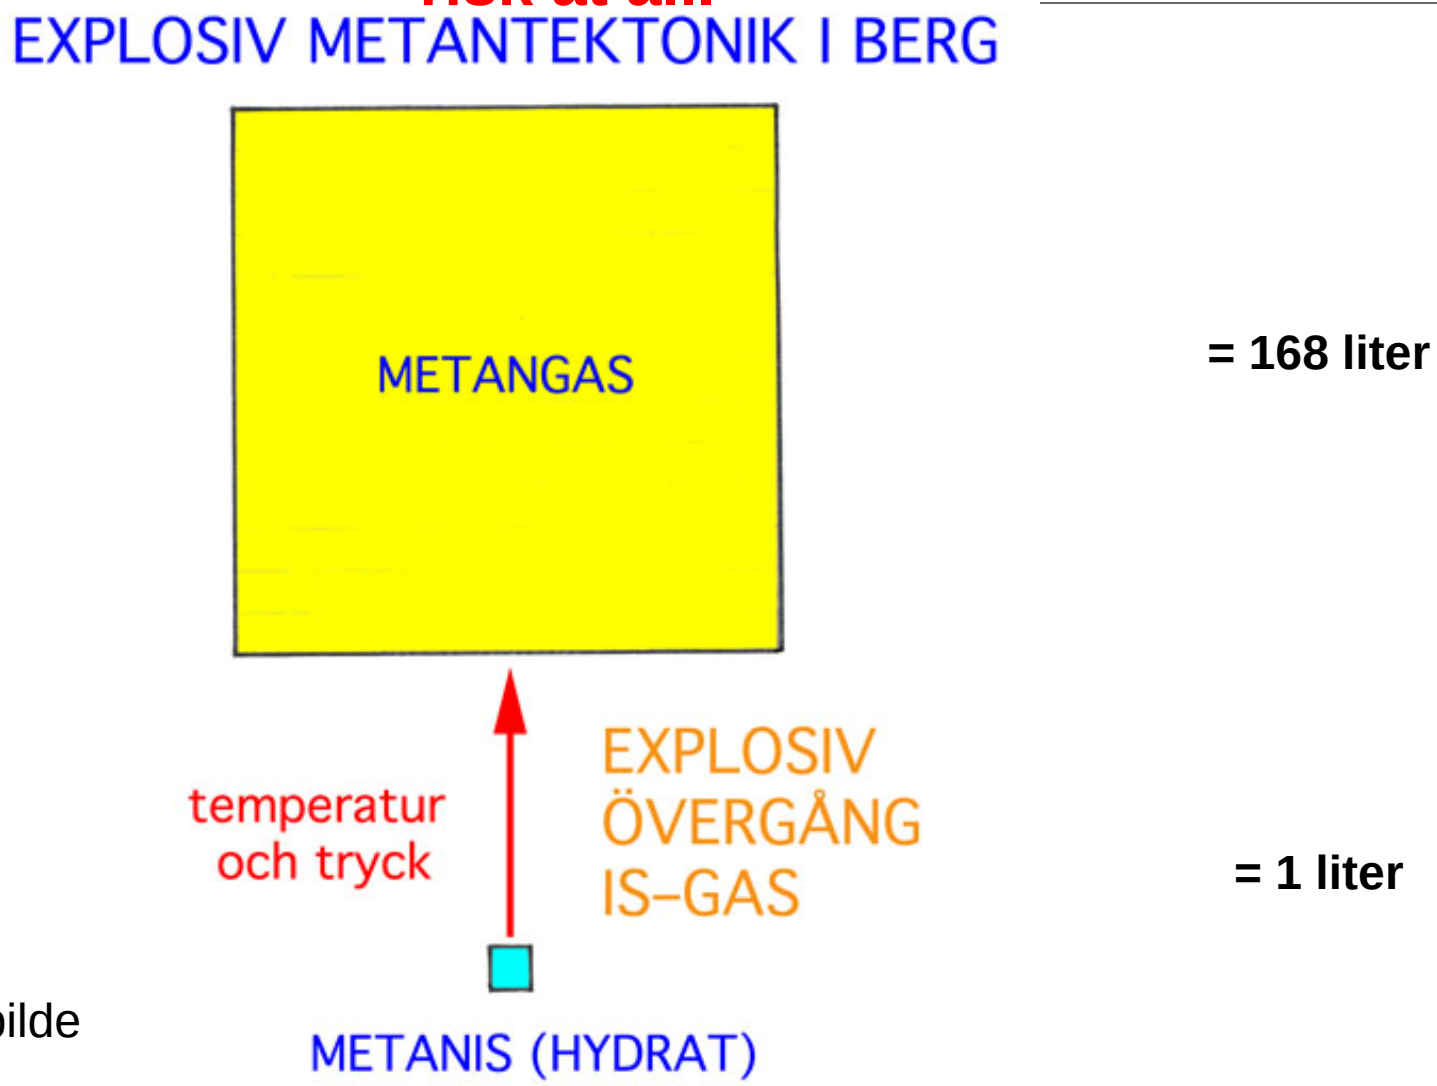
Forsmark, Sweden



Olkiluotto, Finland



Explosive methane tectonics, as methane hydrate ice crystal in the rock turns instantly into gas (at raising temperatures after the ice age). SKB does not discus this risk at all.



N.A Mörnera bilde

The quarrying explosives and the radioactive wastes are planned to be brought down in to the rock at the same time in the repository building process.

explosives and radioactive wastes

The existence of all life forms around the Baltic Sea is threatened if the explosion of nuclear wastes occurs on the Baltic Sea shore.

The toxic highly radioactive wastes disperse in to the sea

MKB = EIS

The preliminary **Environmental Impact Statement** ***(****only in Swedish)* was published in the end of 2009 and the whole public inquary process was finished at the concluding SKB meeting in Forsmark February 6th 2010.
Download:
http://www.skb.se/e772c90a-2015-4d8b-b259-80e5722de769.fodoc

- Radiation is dicussed only on the pages 37-38 , with an astonishing statement that after 100.000 years the levels of radioactivity of the reposited waste will be similar to the natural bakground levels. That is incorrect as most of the waste is Uranium that remains highly radioactive for 45 billion years.
- Second crucial error is on page 37, where it is stated that it is enough to use ICRP radiation risk estimation model, just because Swedish Rad Protection Agency SSM.se has so recomended.

European Spallation Source is being built in Lund, Sweden

www.esss.se

ESS is not defined as a nuclear facility!!!

Part of the target will be exchanged every 45 days and stored in the nuclear waste repository

ESS-S claims that the mercury target is a closed system.

The part of the Mercury target where the proton beam enters into the Mercury is exposed to intensive heat flow and **extremely intense radiation**.

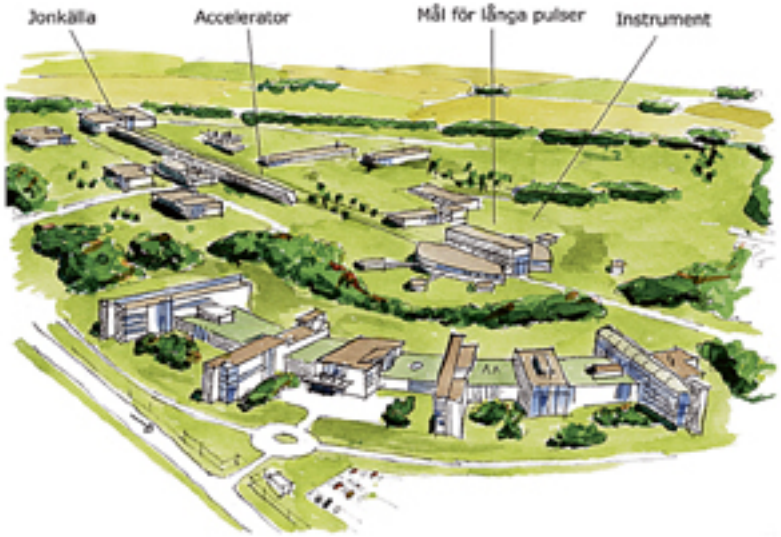
A part of the target has to be exchanged after 45 days run of the ESS and will have to be stored in a nuclear waste repository.

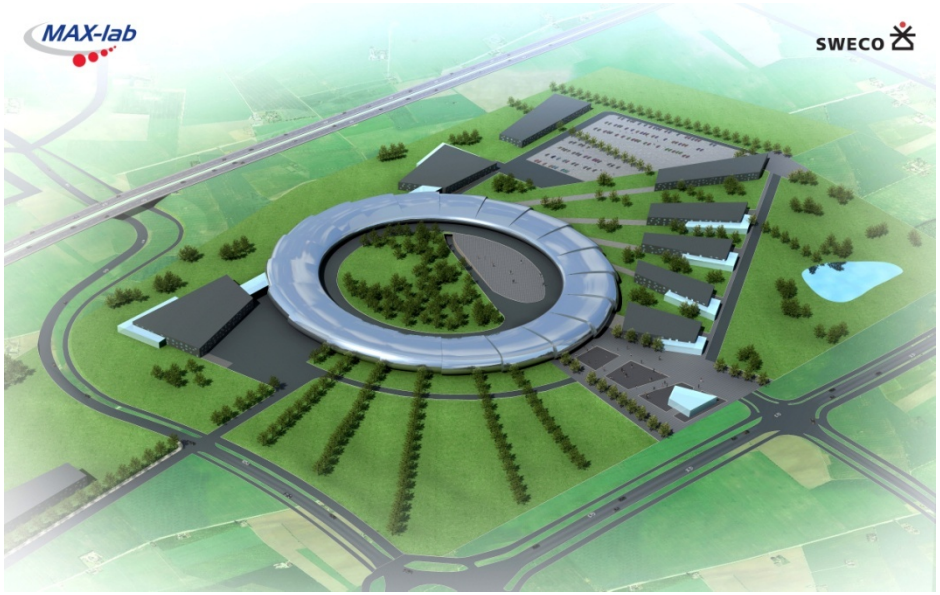
European Spallation Source

- ESS will be the worlds largest and most modern neutron scattering facility. 7 of the 26 neutron scattering facilities around the world have designs comparable with the ESS and most of them are equiped with sub-critical reactors allowing transmutation studies

Even MAX IV - next generation synchrotron radiation facility (www.maxlab.lu.se) at ESSS.se

ESS





Future Transmutation of Nuclear Waste ?

A future Accelerator-Driven Nuclear Waste Transmutation System would consist of three major sub-systems:

- **a proton accelerator (like ESS)** with very high power (5 MW for a demonstrator, up to ~50 MW for an industrial burner);
- **a burner reactor** where spallation and transmutation would occur;
- **a processing plant** in which short-lived isotopes that could not undergo further transmutation would be removed for secure disposal, and where other isotopes could be recycled into new fuel assemblies for the burner reactor.

So as the global industry this year 2010 starts to build in Lund the first of the three components necessary for a transmutation plant.

Are they planning more facilities ?
Would they tell ?

Olof Karlsson, physicist and chairman of Sweden's alternative energy organizations (SERO):

- ”The fact that the accelerator may be the first step towards a new prototype reactor (which was first imagined by Carlo Rubbia) on Swedish ground – this is something that nobody wants to talk about. But if you know something about nuclear physics, you should realize that the size and effect of ESS is meant for transmutation experiments on a large scale – not just as occasional experiments.

- ESS could be the first phase in developing a full scale, scary Rubbia reactor – accompanied with the necessary reprocessing plants.

- The municipality (Lund) which is expected to give territory to establish the European Spallation Source project, should at least get legal guaranties, that transmutation of nuclear waste is not part of what ESS is going to be used for!” But even then tomorrows legal guaranties can be changed in the future.

Sweden is among the world's top arms exporters in per capita terms

- Institutions like the Nobel Prize have helped link Sweden's international reputation to peace and reconciliation. But few people know Sweden is also one of the world's top exporters of weapons. Sweden is among the world's top arms exporters in per capita terms. Its clients include the United States and Britain, with shipments more than doubling since 2000.
- Alfred Nobel established Bofors company in Karlskoga for the weapons industry. One of its group is now owned by British Aerospace (BAE), Europe's biggest weapons company. And the other group went into Saab, Bofors Dynamics, which is another Swedish-owned company. General Motors in the United States owns Saab, the automaker, and Ford owns Volvo, another Swedish company.
- Saab is Sweden's biggest weapons manufacturer

Nuclear waste in Uranium weapons

Despite what Swedish and global *nuclear* industry tells us or plans without telling, Swedish and Finish *nuclear waste* is the byproduct contributing to further proliferation of *nuclear weapons* materials – Uranium weapons, causing permanent genetic damage around the world http://www.bsrrw.org/?page_id=109

Nuclear Industry = war mangling national economy parasite

The message of Swedish economist Åke Sundström´s book fr 2002, Nuclear Power has made Sweden poorer “Kärnkraften har gjort Sverige fattigare”, may be summarised :

After over-investing in the military Nuclear Power investments in the 60s and 70s, the mainly government-owned Swedish Nuclear power companies were forced to dump the surplus on to unwilling consumers *at prices around half the cost of production*. That is how 300 billions SEK were lost, just in Sweden, already before the shift of millenia.

Background material for the Baltic countries (http://www.skb.se/Templates/Standard____24250.aspx)

- Interim storage facility, encapsulation plant and final repository for spent nuclear fuel. Updated version. January 2008.
- Background information - Finnish (pdf)
- General structure of the EIS for the final repository system, to be submitted with the permit applications. December 2007.
- General structure of the EIS for the final respository system – Finnish
- Safety and radiation protection. May 2007.
- Long-term safety for KBS-3 repositories at Forsmark and Laxemar – a first evaluation, Main report of the SR-Can project, October 2006.
- Long-term safety for KBS-3 repositories at Forsmark and Laxemar – a first evaluation, Summary of the SR-Can project, October 2006.
- Account of consultation

Some of EURATOM aims
TITLE I. The tasks of the EURATOM Community

Article 2.

”The EURATOM Community is responsible for

- a) **promoting nuclear research in the** Member States (…)
- c) **facilitating investments necessary** for development of nuclear energy (…)
- f) **exercising the right to ownership of** nuclear materials”

http://www.j.dk/images/bondes/EURATOM_reader-friendly_-_FINAL.pdf

EURATOM treaty is superior the European Union

The EURATOM is officially superior the European Union.

Article 3 of (the new for Lisbon Treaty revised version of) EURATOM Treaty states following:

> *"The tasks entrusted to the (EURATOM) Community shall be carried out by the following institutions:* ***a European Parliament, a Council, a Commision, A Court of Justice, a Court of Auditors. Each institution*** *shall act within the limits of the power conferred upon it by this (EURATOM) Treaty."*

In other words **all these institutions of European Union have the task to promote, support and favour nuclear power above other energy types.**
